

**Komodo Dragons Word Problems (Percentages)**

Name \_\_\_\_\_

1. Komodo Dragons are said to be able to eat 80% of their body weight in a single feeding. If a 200-pound Komodo Dragon kills a deer and eats 80% of its body weight, how many pounds of deer meat did it eat?
2. There are approximately 6,000 wild Komodo dragons scattered among five Indonesian islands. Of those 6,000 Komodo dragons, 300 are thought to be breeding females. What percent of wild Komodo dragons are breeding females?
3. Female Komodo dragons typically weigh 25 percent less than male Komodo Dragons. If an average adult male dragon weighs 240 pounds, how much could a female be expected to weigh?
4. 70% of a Komodo dragon's body weight is water. Based on this statistic, how much of a 180-pound Komodo dragon is made of water (in pounds)?
5. Of the 6,000 wild Komodo dragons in Indonesia, approximately 40% live on the Indonesian island of Flores. How many Komodo dragons live OUTSIDE of Flores?
